

## MCKNIGHT ROAD UPDATE

### Utility Work

Missouri American Water continues with their Water Main Replacement project on McKnight from Ladue Road to Clayton Road. Laclede Gas has begun their gas main replacement work in this same stretch. Work by both utility companies is projected to be completed in October 2014.

With regard to the uneven pavement, the City continues to work with the utility companies to minimize the problem areas during construction and to ensure that permanent pavement repairs will be completed.

### City Improvements: Bridge Replacements, Sidewalk Installation, and Pavement Restoration

Two bridges will be replaced as part of this project; one just south of Robin Hill and one just south of Black Creek. The north bridge will be constructed during a 75 day road closure that is scheduled to begin on 9/2/14. The south bridge will be constructed during a 60 day road closure that is *tentatively* scheduled for February & March 2015.

Sidewalks will be installed on the east side of McKnight between Ladue Road and Clayton Road along with storm sewer improvements and curb installation. The existing asphalt pavement will be resurfaced on the entire length of McKnight Road between Ladue and Clayton. The sidewalk work is anticipated to begin in Fall 2014 with the pavement work occurring in Spring 2015. The overall completion date for the project is late Spring 2015.
